

2015 Evans Hall Lecture Series and Awards Ceremony

EMORY

Dr. Mathias Schacht
Department of Mathematics
University of Hamburg

**Extremal problems in
combinatorics**

Extremal combinatorics is an important branch in discrete mathematics. In this talk we will focus on recent developments that concern extensions of some classical results from extremal graph theory to the settings of sparse random graphs and of quasirandom hypergraphs.

Thursday, April 23 at 4pm in MSC E208.
Reception to follow in atrium.

The awards ceremony, lecture, and reception are open to the Emory community.
